The MAILING DATE of this communication appears on the cover sheet with the correspondence address						
Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status

DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 28 and 30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 3. The term "high" in newly added claims 28 and 30 is a relative term which renders. the claims indefinite. The term "high" is not defined by the claims, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. The claim limitation of the praseodymium-manganese oxide having a *high* molar ratio of praseodymium to manganese is rendered indefinite by the use of the term "high" in the claims.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1, 3-10, 12-14, and 28-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cathey (US 6255772) in view of Rasmussen (US 5762773).

Application/Control Number: 09/339,958

Art Unit: 2879

6. Regarding independent claims 1 and 10, Figure 3 of Cathey shows a fieldemission display device with a faceplate including a screen (306) having a phosphor coating (320). A baseplate assembly (202) includes an emission source (204) provided opposite the screen having electron-emission cathode tips (310) arranged in an array and a low potential extraction grid (304). A black matrix (322) is provided on the screen. In Column 9, Lines 14-17, Cathey disclose that the black matrix may be formed of any suitable material and should not be affected by electron bombardment, which would make the black matrix insulative. In regards to claim 3, Figure 3 of Cathey shows the emission source including an array of field emitter tip cathodes (310). In regards to claim 4, Figure 3 of Cathey shows the emission source including a low potential extraction grid (304) that is provided adjacent the field emitter tip cathodes. In regards to claim 5, Figure 3 of Cathey shows the array of field emitter tips being formed in a matrix addressable by row select control signals. In regards to claims 6 and 12, Cathey disclose that the extraction grid may be formed as a continuous layer or as parallel strips, and the field emitter tip matrix is also addressable by column select control signals (col. 2, In. 40-55). In regards to claims 7 and 13, Figure 3 of Cathey shows the extraction structure including a plurality of column electrodes (204) addressable by column select signals. In regards to claims 8 and 14, Figure 3 of Cathey shows a matrix of anode electrodes (308). Cathey also disclose that a field-emission device has one or more voltage sources that maintain emitter tips at potential lower than the extraction grid. In regards to claim 9, Cathey disclose that the black matrix is provided for defining

Art Unit: 2879

the discrete pixel areas of the display, which would improve the image contrast (Column 3, Lines 15-18).

- 7. Cathey disclose the claimed invention except for the black matrix being formed of praseodymium-manganese oxide.
- 8. Figures 1-5 of Rasmussen teach that it is known in the art to provide field emission displays with a black matrix (16) on the screen being formed of material including praseodymium-manganese oxide (col. 5, ln. 33) for producing high-resolution displays.
- 9. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a black matrix of praseodymium-manganese oxide, as taught by Rasmussen, in the display device of Cathey for improving the image quality of the display.
- 10. Regarding newly added claims 29 and 31, Cathey and Rasmussen fail to exemplify the particles of the PrMnO₃ having an average size of 2μ m.
- 11. It would have been obvious to one having ordinary skill in the art to provide the particles of $PrMnO_3$ having an average size of $2\mu m$, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art.

Response to Arguments

12. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 09/339,958

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Quarterman whose telephone number is (703) 308-6546. The examiner can normally be reached on M-F (8-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (703) 305-4794. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7382 for regular communications and (703) 308-7382 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
